No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 245

NUMBER 1, FEBRUARY 15, 1986

COMMUNICATIONS

Inhibition of Fructose Bisphosphatase and Stimulation of Phosphofructokinase by a Stable Isosteric Phosphonate Analog of Fructose 2,6-bisphosphate
Ronald W. McClard, Sotirios Tsimikas, and Kenneth E. Schriver 282

The Primary Structure of Monkey Pituitary Growth Hormone
Choh Hao Li, David Chung, Hans-Werner Lahm, and Stanley Stein 287

A Serum Test for Cystic Fibrosis Using Monoclonal Antibody 19-9
David D. Roberts, Diane L. Monsein, Ralph C. Frates, Jr., Milica S. Chernick, and Victor Ginsburg 292

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

The Use of Dithionite Reduction to Identify the Essential Tyrosine Residue in the F_1-ATPase from the Thermophilic Bacterium, PS3, That Reacts with 7-Chloro-4-nitrobenzofurazan
John G. Verburg, Masasuke Yoshida, and William S. Allison 8

Biosynthesis of the Farnesyl Moiety of Heme *a* from Exogenous Mevalonic Acid by Cultured Chick Liver Cells *Jon D. Weinstein, Ruth Branchaud, Samuel I. Beale, William J. Bement, and Peter R. Sinclair* 44

Studies on NADH(NADPH)-Cytochrome *c* Reductase (FMN-Containing) from Yeast: Steady-State Kinetic Properties of the Flavoenzyme from Top-Fermenting Ale Yeast *Mark S. Johnson and Stephen A. Kuby* 271

ENZYME MECHANISMS AND METABOLISM AND COENZYMES

Hepatic Subcellular Distribution of Short-Chain β-Ketoacyl Coenzyme A Reductase and *trans*-2-Enoyl Coenzyme A Hydratase: 25- to 50-Fold Stimulation of Microsomal Activities by the Peroxisome Proliferator, Di-(2-ethylhexyl)phthalate *Lynda Cook, Mahmoud N. Nagi, James Piscatelli, Timothy Joseph, M. Renuka Prasad, Daniele Ghesquier, and Dominick L. Cinti* 24

Diol Metabolism and Diol Dehydratase in *Clostridium glycolicum*
Maris G. N. Hartmanis and Thressa C. Stadtman 144

Immunoaffinity Purification of Rat Liver Transketolase: Evidence for Multiple Forms of the Enzyme *Francesco Paoletti and Donatella Aldinucci* 212

GLYCOPROTEINS AND GLYCOLIPIDS

^{1}H-NMR Assignments of G_{M1}-Oligosaccharide in Deuterated Water at 500 MHz by Two-Dimensional Spin-Echo *J*-Correlated Spectroscopy
Richard L. Ong and Robert K. Yu 157

HORMONE STRUCTURE AND FUNCTION

Reptilian Enkephalins: Implications for the Evolution of Proenkephalin
I. Lindberg and L. White 1

LIPIDS AND PROSTAGLANDINS

Effects of Lysosomotropic Agents on Lipogenesis
Grace L. Chen, Sarah L. Sutrina, Karen L. Frayer, and Winston W. Chen 66

Chinese Hamster Ovary Cells Depend on Exogenous Lipids to Survive Phospholipase C Treatment *Paul S. Wright and Claudia Kent* 104

Phospholipid Methylation in Rabbit Aorta
Alice H. Lichtenstein, José Walewski, Peter Brecher, Carl Franzblau, Barbara Faris, and Aram V. Chobanian 187

MEMBRANES, CELL SURFACES, AND RECEPTORS

Crosslinking of Actin Filaments and Inhibition of Actomyosin Subfragment-1 ATPase Activity by Streptococcal M6 Protein
Joseph M. Chalovich and Vincent A. Fischetti 37

Extracellular ATP Activates Polyphosphoinositide Breakdown and Ca^{2+} Mobilization in Ehrlich Ascites Tumor Cells *George R. Dubyak* 84

Effects of Three Stabilizing Agents—Proline, Betaine, and Trehalose—on Membrane Phospholipids *Alan S. Rudolph, John H. Crowe, and Lois M. Crowe* 134

PHYSICAL BIOCHEMISTRY

The Self-Association of Insulin: Determinations Based on a Differential Gel Adsorption Procedure *Erik Helmerhorst and Gilbert B. Stokes* 238

PLANT BIOCHEMISTRY AND PHOTOSYNTHESIS

Purification and Characterization of Ribulose-5-phosphate Kinase from Spinach
Michael A. Porter, Sylvia Milanez, Claude D. Stringer, and Fred C. Hartman 14

Isozymes of Phosphoglyceromutase from the Developing Endosperm of *Ricinus communis:* Isolation and Kinetic Properties
Frederik C. Botha and David T. Dennis 96

Conversion of Serine to Glycerate in Intact Spinach Leaf Peroxisomes: Role of Malate Dehydrogenase *Charles Yu and Anthony H. C. Huang* 125

Expression of Hydrogenase Activity in Barley (*Hordeum vulgare* L.) after Anaerobic Stress *V. Torres, A. Ballesteros, and V. M. Fernández* 174

Active-Site-Directed Inhibition of Phosphoenolpyruvate Carboxylase from Maize Leaves by Bromopyruvate
Daniel H. Gonzalez, Alberto A. Iglesias, and Carlos S. Andreo 179

Properties of the Cyanobacterial Coupling Factor ATPase from *Spirulina platensis.* I. Electrophoretic Characterization and Reconstitution of Photophosphorylation *David B. Hicks and Charles F. Yocum* 220

Properties of the Cyanobacterial Coupling Factor ATPase from *Spirulina platensis.* II. Activity of the Purified and Membrane-Bound Enzymes
David B. Hicks and Charles F. Yocum 230

Oscillatory Response of Photosynthesis in Leaves to Environmental Perturbations: A Mathematical Model *Christoph Giersch* 263

PROTEIN STRUCTURE AND FUNCTION

On the Relationship between Reaction Order and Stoichiometry in Irreversible Inhibition of Enzymes *Inci Özer* 153

Sequence and Antigenicity of Calf Metallothionein II
D. R. Winge, W. R. Gray, A. Zelazowski, and J. S. Garvey 254

PROTEIN SYNTHESIS AND POST-TRANSLATIONAL PROCESSING

Partial Reassembly of Yeast 60 S Ribosomal Subunits *in Vitro* following Controlled Dissociation under Nondenaturing Conditions
John C. Lee and Rochelle Anderson 248

REGULATION OF METABOLISM AND OF ENZYME ACTION

Characterization of Intestinal Brush Border Guanylate Cyclase Activation by *Escherichia coli* Heat-Stable Enterotoxin
Mohamed M. R. ElDeib, Charlotte D. Parker, Trygve L. Veum, Gene M. Zinn, and Arnold A. White 51

An Immunochemical Study of δ-Aminolevulinate Synthase and δ-Aminolevulinate Dehydratase in Liver and Erythroid Cells of Rat
Masayuki Yamamoto, Hiroyoshi Fujita, Norimichi Watanabe, Norio Hayashi, and Goro Kikuchi 76

β-Sulfur Substituted α-Ketoglutarates as Inhibitors and Alternate Substrates for Isocitrate Dehydrogenases and Certain Other Enzymes
Gerhard W. E. Plaut, Tadashi Aogaichi, and Jerome L. Gabriel 114

Similarity of Kinetics of Three Types of Myeloperoxidase from Human Leukocytes and Four Types from HL-60 Cells
Kazuo Suzuki, Michiyuki Yamada, Katsuhiko Akashi, and Toshio Fujikura 167

An Insulin-Stimulated (Ribosomal S6) Protein Kinase from Soluble Extracts of H4 Hepatoma Cells
Raphael A. Nemenoff, J. Ryan Gunsalus, and Joseph Avruch 196

The Reactions of the Phosphorylated Pathway of L-Serine Biosynthesis: Thermodynamic Relationships in Rat Liver *in Vivo*
Robert W. Guynn, David K. Merrill, and Karen Lund 204

ERRATUM

Volume 243, Number 1, November 15, 1985: Douglas Darr and Irwin Fridovich, "Vanadate Enhancement of the Oxidation of NADH by O_2^-: Effects of Phosphate and Chelating Agents," pages 220–227 295

NUMBER 2, MARCH 1986

INVITED PAPER

Activation and Inactivation of an Enzyme Catalyzed by a Single, Bifunctional Protein: A New Example and Why *J. N. Burnell and M. D. Hatch* 297

COMMUNICATIONS

A Novel Type of Aryl Sulfotransferase Obtained from an Anaerobic Bacterium of Human Intestine *Kyoichi Kobashi, Yoichi Fukaya, Dong-Hyun Kim, Teruaki Akao, and Sachiko Takebe* 537

Instructions to Authors[1]

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Short Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of figures, to:

Archives of Biochemistry and Biophysics
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Communications offer a means of early publication of work of such importance that rapid release is warranted. Normally they should not exceed 15 manuscript pages in length (including text, bibliography, tables, and figures). The review and printing of such papers will be expedited to provide earliest possible publication.

Form of Manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted. See the back cover for the listing of the Subject Areas.

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in

---

[1] An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and no larger than 8.5 × 11 in. Letters and numbers should be at least $\frac{3}{16}$ in. (4 mm) in height (Leroy lettering size 200). Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1980. Please note the following examples.

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **195,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds.), Vol. 4, pp. 246–409, Academic Press, New York.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
